From: Lead Service Inspection

Re: Minnesota Department of Health Lead Service Line Inventory

The City of Wykoff along with aid from Stantec Staff are in the process of performing mandatory inspections of the water service line material for purposes of reporting to the Minnesota Department of Health as a stipulation of our Municipal Water Permit.

This inspection should only take 5 minutes at most, and the purpose is to identify and document the material type of the pipe feeding your property with drinking water.

We visited your property on _____ and did not find anyone home at the time. Please call 507-529-6030 to set up a time for the inspection with Stantec's team, or follow the directions below to perform the inspection yourself without the necessity of coordinating with Stantec or the City.

You also have the option to complete this inspection on your own by filling out a short survey. The survey can be accessed by scanning the QR code below or by visiting: <https://arcg.is/1T9buT4> The survey asks residents four questions and to upload a photo of their water service line where it enters the house (typically below the water meter). See the survey for more information about how to determine what material your water service is made from and what to photograph.

On behalf of the City of Wykoff and Stantec, we thank you for your cooperation.
